

**System, Method, and Computer Program Product for
Mediating Notes and Note Sub-notes Linked or Otherwise
Associated with Stored or Networked Web Pages**

Abstract

5 A system and method of manipulating notes linked to Web pages, and of
manipulating the Web pages. These Web pages (or portions of Web pages) can
be stored at a Web site or in a local file system. The method of linking notes to
Web pages operates by enabling a user to select a portion of a Web page, creating
10 a annotation, linking the annotation to the selected portion, receiving a request
from a user viewing the annotation to display the selected portion linked to the
annotation, and invoking an application, if the application is not already invoked,
and for causing the application to load the Web page and present the selected
portion.
